

*My problems started when I fell out of a large moving truck, and hit my head on pavement. It bounced like a basketball on pavement. There was bleeding from the back of my head. The hospital did an MRI and said that there was nothing wrong. I had dizziness, headaches, loss of balance, and I couldn't turn on my side, or raise up from lying on my back because of dizziness. I lost balance often. I was in and out of hospitals often and had many MRIs for 13 years, always showing nothing. I had eye problems, and my eye doctor set me up with Dr. Sanders. Dr. Sanders said I had crystals that broke off in my ear canal, and I have been feeling so much better now. I'm so very thankful for Dr. Sanders' work, to help make my life enjoyable again!*
