

Acute vertigo intermittently. Vertigo was precipitated by position change. Mostly laying down on the left side. Experienced severe room spins. Diagnosis of Benign Paroxysmal Positional Vertigo. Treatment included “canalith repositioning maneuver”. My vertigo vanished immediately and has not returned. I have no room spinning or dizziness when I get out of bed. It’s almost like a miracle - I feel healed! It’s wonderful! Dr. Sanders is amazing and I would tell everyone to go see him if you have this issue. Life is good.
